## PROFILE

---

Master's student in Software and Intelligent Systems Engineering with a strong foundation in Artificial Intelligence, Deep Learning, and system architecture. Passionate about building intelligent systems that solve real-world problems — from conversational AI and NLP to cloud-deployed production applications. Fluent in Arabic, French, and English; comfortable across the full stack from model training to DevOps and cloud infrastructure.

## EDUCATION

---

|                                                                         |             |
|-------------------------------------------------------------------------|-------------|
| <b>M.Sc. Software &amp; Intelligent Systems Engineering</b>             | 2024 – 2026 |
| <i>University of Constantine 2, Algeria — Expected graduation: 2026</i> |             |
| <b>B.Sc. Software Engineering</b>                                       | 2021 – 2024 |
| <i>University of Constantine 2, Algeria</i>                             |             |
| <b>Baccalaureate — Experimental Sciences</b>                            | 2021        |
| <i>Algeria</i>                                                          |             |

## PROJECTS

---

|                                                                                                                                                                                                                                                                                                                                                  |             |
|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|-------------|
| <b>MACES — Multi-Agent Voice Assistant</b>                                                                                                                                                                                                                                                                                                       | 2025 – 2026 |
| <i>Master's Thesis</i>                                                                                                                                                                                                                                                                                                                           |             |
| <ul style="list-style-type: none"><li>Built a multilingual voice assistant (Arabic, Darija, French, English) that handles client queries through a multi-agent conversational AI pipeline, deployed as a production system.</li><li>Stack: Python, FastAPI, LangGraph, RoBERTa, FAISS, Mistral, Docker, Jenkins, Azure ACI, Terraform.</li></ul> |             |

**Connected Nursery — Digitalisation Platform**  
*Bachelor's Capstone · University of Constantine 2*

2023 - 2024

- Built a full-stack web application to digitalise nursery workflows — enrolment, scheduling, and parent communication — replacing paper-based processes.
- Designed the system architecture and database model; led backend development and deployment.

**Gravis — Petri Net Modelling Tool**

2023

- Developed a desktop application for modelling, simulating, and analysing complex concurrent systems using Petri nets.
- Implemented reachability analysis and visual simulation of token firing sequences.

SKILLS

---

**AI / ML:** Deep Learning, NLP & LLMs, RAG Systems, Computer Vision, CNN, Generative AI

**Architecture:** System Architecture, Databases, Networking

**DevOps / Cloud:** Docker, Jenkins CI/CD, Azure ACI, Terraform, AWS

**Languages:** Arabic (Native), French (Fluent), English (Fluent)

**Soft Skills:** Critical thinking, Problem solving, Discipline

CERTIFICATES

---

**Fundamentals of Deep Learning**  
*NVIDIA*

Nov 2025

**Cloud Foundations**  
*AWS Academy*

2026
